

Data Integrations

Easily integrate our data with most geospatial data platforms

If you already use an existing asset management platform, RoadBotics will work with you to provide our geospatial data in a shapefile that can be easily integrated into most GIS-enabled platforms. This data is key to filling the void of pavement condition data and can simplify the pavement management planning process.

Some of the platforms we successfully integrate with include:

Esri ArcGIS

Mapping and location-based analytics platform created by Esri

CSDatum

Web-based mapping application developed by CS Davidson

ManageMyRoads

Esri-based asset management software from RoadBotics' Enterprise Partner BETA Group, Inc.

Traistr

Web-based GIS platform that allows users to manage any type of asset from RoadBotics' Enterprise Partner McMahon Associates.

Don't see your existing platform management program on this list? Our team is ready to discuss custom integration options with you.
